

General Atomics announces implementation of Ariba® Supplier Lifecycle & Performance Management

General Atomics (GA) is pleased to announce the upgrade of the Ariba® Supplier Information Management (SIPM) to SAP Ariba® Supplier Lifecycle & Performance Management (SLP). SLP integrates with our procurement processes to scale compliance to the entire GA supply base. This new tool replaces the legacy SIPM module previously used to collect annual representations and certifications (Reps & Certs). If you have previously registered with GAs Ariba® SIPM, your login and password for SLP will remain the same. When your existing Reps & Certs expire, you will receive an invitation to use the new SLP tool.

The benefits to you that are associated with GA's implementation of SLP include:

- Ariba supplier information synchronized with the GA enterprise resource planning system
- Direct management of your company information and the ability for GA representatives to access your information real-time
- A consistent, enterprise wide solution with accessibility across GA and its affiliates; there is a single registration form for all business units using an expandable questionnaire that is based on commodity, service or business unit
- Supplier Questionnaires (SPQs) and Summary of Certifications (SOCs) have been replaced by shorter Modular Questionnaires (MQs) reducing turn-around time for the registration and certification process
- Status of MQs will be visible for your convenience
- The system will generate reminders for updating expired information or certificates

For more information and registration with GA, please access [Supplier Tools](#).

If you have questions while completing the SAP Ariba® SLP registration, please contact your Procurement representative (Buyer) at GA.

Thank you for your support and continued partnership.
