

## **General Atomics (GA) Selects Ivalua Platform: Implementing a Next-Generation Procurement Supplier Portal**

We are excited to announce that GA has selected Ivalua's platform as its enterprise-wide, cross-functional supplier collaboration solution. The partnership between Ivalua and GA will result in a one-stop portal for collaboration with our supply base, as well as transform our internal Procurement business practices.

This collaborative initiative represents more than just a tool implementation; it marks a significant milestone in our broader digital transformation journey. By introducing this unified platform, we aim to streamline interactions, enhance transparency, and build stronger, more agile partnerships with our suppliers.

"GA is committed to partnering with our Suppliers for mutual success; the Ivalua platform offers the right mix of accessibility, functionality, and security to facilitate and speed up that relationship building."

GA selected Ivalua for its unified, end-to-end supplier collaboration capabilities that break down silos, enhance supply chain performance, and promote powerful partnerships. By centralizing supplier visibility and engagement, GA will enhance collaboration, transparency, and traceability across all functions. Furthermore, Ivalua's quality assurance and compliance features, specifically tailored to the aerospace and defense industry, are key differentiators which played a role in GA's selection.

Equally important is our focus on supplier collaboration. The new portal will provide a centralized, user-friendly interface for suppliers – enabling smoother onboarding clearer communication, and more efficient transaction management.

We are currently in the Planning and Analysis focused on assessing current processes, identifying improvements, and planning for an effective implementation.

Please keep an eye on our Supplier Newsletter and [www.GA.com/Procurement](http://www.GA.com/Procurement) for the latest updates.

Note: Until the Ivalua implementation is complete, GA Suppliers should continue to use the Ariba tool and keep current any information previously submitted to GA.
